

Corpus parity validation report

Corpus parity validation report

- **Generated:** 2026-05-11T00:00:00Z
- **Host:** Darwin arm64 (16 cores), Python 3.14.3
- **pineforge-engine:** 3ed7f8f
- **pineforge-codegen:** 9fa3c60
- **corpus submodule:** 50813bc
- **OHLCV feed:** corpus/data/ohlcw_ETH-USDT-USDT_15m_warmup6m.csv (6-month warmup)
- **Pipeline:** xargs -P16 run_strategy.py → verify_corpus.py --all --include-anomalies
- **Strategies:** 168 total (167 reference + 1 anomaly probe). All have TV trades; none skipped.

Headline (167 reference strategies)

Reference tiers: basic/ , community/ , validation/ . parity-anomalies/ excluded — see anomaly section.

Tier	Count	Δ vs prev
excellent	165	—
strong	2	—
moderate	0	—
weak	0	—
minimal	0	—
missing	0	—
total	167	—

Reproduce:

```
find corpus -mindepth 2 -maxdepth 2 -type d \
| xargs -P16 -I{} python3 scripts/run_strategy.py {}
python3 scripts/verify_corpus.py --all --include-anomalies
```

Standards

Two tiers of thresholds applied to four dimensions per strategy. Source: scripts/verify_corpus.py:43-51 .

Dimension	strict (excellent)	strong (relaxed)
trade-count delta	< 1.0%	< 5.0%
entry-price p90 delta	< 0.01%	< 0.1%
exit-price p90 delta	< 0.01%	< 0.5%
per-trade PnL p90 delta	< 1.0%	< 100%

Strict thresholds match `pineforge-utils/validator/validate.py::DEFAULT_PARITY_STRICT` exactly — no production override; pass here $\Leftrightarrow$ pass there.

Label rules:

- **excellent**: all four dimensions pass strict.
- **strong**: matched/TV $\geq 99\%$ AND all four pass the relaxed tier (typical case: count delta $\leq$ a few trades, prices/PnL still strict).
- **moderate**: matched/TV $\geq 90\%$.
- **weak**: at least one trade matched but $< 90\%$.
- **minimal**: zero matches with non-empty inputs.
- **missing**: `engine_trades.csv` absent.

Boundary effect (count delta on the strict edge)

A strategy that matches every TV trade trade-by-trade with `entry/exit/PnL` all passing strict, but emits 1–N extra (or fewer) trades near the warmup/terminal edge, falls into **strong** purely because the count delta crosses the 1.0% strict gate. This is a **boundary effect**, not a parity regression:

- Trades inside the common window match exactly.
- Extras live outside the mutually trimmed window or land on the warmup boundary where TV's bootstrap and the engine's bootstrap differ by a single bar.
- Per-trade economics (entry/exit/PnL) stay inside strict on every matched trade.

Both `strong` cases below are boundary effects: prices and PnL pass strict, only count crosses 1.0%.

strong tier detail

`community/VCP` → **strong** (*boundary effect*)

```
Profile:      strict
TV trades:    71
Engine trades: 72
Matched:      71 (100.0% of TV)
Count delta:      1.3889% (X – boundary)
Entry-price p90 delta: 0.0000% (OK)
Exit-price p90 delta: 0.0005% (OK)
PnL           p90 delta: 0.1026% (OK)
```

`community/scalping-wunder-bots` → **strong** (*boundary effect*)

```
Profile:      strict
TV trades:    419
Engine trades: 424
Matched:      417 (99.5% of TV)
Count delta:      1.1792% (X – boundary)
Entry-price p90 delta: 0.0000% (OK)
Exit-price p90 delta: 0.0005% (OK)
PnL           p90 delta: 0.1235% (OK)
```

Anomaly probes (excluded from headline)

Probes that *deliberately* surface TV-side non-determinism. Engine is correct; divergence is documented in `pineforge-utils/parity-anomalies/` . Excluded from headline so they don't mask as regressions.

`parity-anomalies/equity-mirror` → **weak** (*documented anomaly, expected*)

Profile:strict

TV trades:24

Engine trades:25

Matched:13 (54.2% of TV)

Count delta:4.0000%

Entry-price p90 delta:0.0000%

Exit-price p90 delta:0.0000%

PnL p90 delta:2.3202%

-> weak

Per-strategy detail (4 dimensions, all 168)

Columns: TV/eng trade count, matched ratio, then the four parity dimensions as percent deltas. **Bold** = fails strict on that dimension.
